FOR IMMEDIATE RELEASE

Delta Adds Resolver Feedback Interface to RMC150 Motion Controllers

August 20th, 2008 – Vancouver, WA. Delta Computer Systems, Inc. announces more rotary motion capability by adding absolute position feedback with a resolver interface module for the multi-axis RMC150 motion controller.

Resolver applications may include position or speed control and also can be used in applications requiring pressure or force control when combined with other RMC150 and RMCTools software capabilities.

“Customer demand continues to grow for deterministic closed loop resolver feedback applications in the aerospace, energy and metals industries.” stated Peter Nachtwey, President of Delta Computer Systems, Inc. “This resolver addition allows the RMC150 to control actuators exposed to high temperatures, vibration, shock, radiation and other harsh conditions where encoders don’t survive,” Nachtwey added.

Delta’s RMC150 motion controllers with RMCTools software are available with up to 8 resolver feedback axes in increments of 2 axes per resolver module. The resolver interface adds to the more than 500 different combinations of SSI, MDT, analog, and quadrature feedback available on the RMC150 Motion Controller.

About Delta Computer Systems

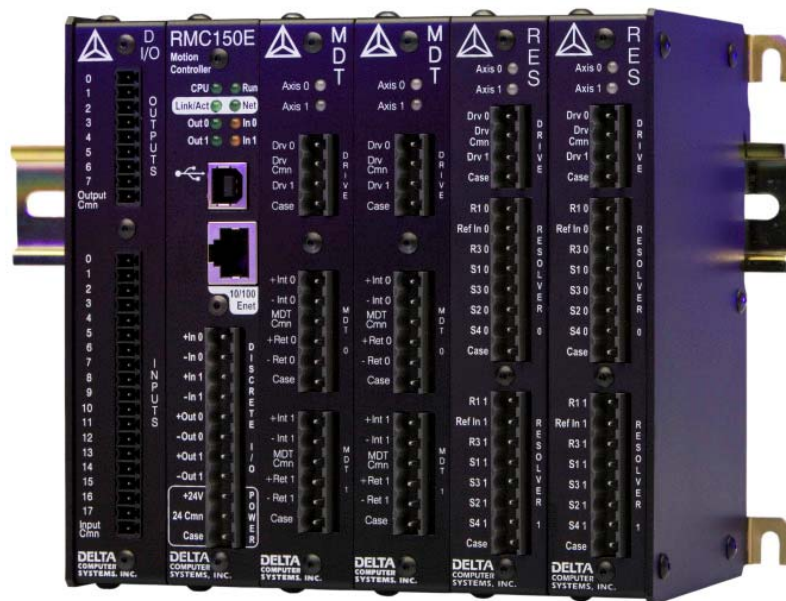

Delta Computer Systems, Inc. designs, manufactures, markets, and supports motion controllers, color sensors, and specialized products. With more than 25 years of motion control product development, customer responsiveness and support for both legacy and new products, you can rely on Delta for lasting value. **Delta’s motion controllers will be demonstrated next during Fabtech 2008-Las Vegas.** More details and information are available at www.deltamotion.com or by contacting Bill Savela, Delta Computer System, Inc. 11719 NE 95th Street, Suite D, Vancouver, WA 98682. P 360-254-8688, F 360-254-5435, or bsavela@deltamotion.com

Editor: Your personnel may indicate RMC150 RESOLVER on computer printout for inquiry identification.
